Hi Benedict,

We have done implementing the rectification. Here is the evidence:

Before

After

Please validate it in your end.

Regards,
Okky

Hi Okky

I am happy for that to be implemented.

Cheers,

Subject: Re: Oil Data Bug

Hi Benedict,

Here the changes are:

Firstly, we found that the response of oil changed is different with previous value which are Yes/No, but API gives Y/N, so we implemented a logic to convert them.

Secondly, we implemented html tag remover for Note of oil analysis sample.

If you don't have any concern, we will implement them into PRD environment shortly.

Regards,
Okky

Hi Okky

I would think this is an acceptable one to update without a CAB – especially as it is remediation of an implementation that already had a CAB (API implementation).

Can you quickly outline the changes made for the fix and we can go from there?

Hi Benedict,

This has already been fixed in the UAT environment. Do we need CAB for this minor fixes? Or just updating the logic in the pipeline?

Regards,

Okky

Hi Benedict,

We will investigate this issue.

Regards,

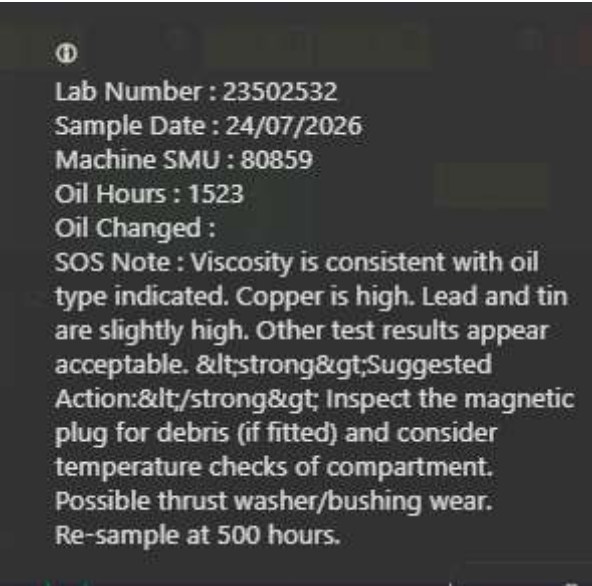

Okky

Subject: Oil Data Bug

Hi BTech

Two minor bugs in the oil sample tool tips:

- Firstly, I have noticed that the Oil Changed parameter has not been present since the move to the API, can you look into this issue? I doubt it is a site issue because if the site teams don't fill it out correctly SOS lab defaults the Oil Changed parameter to "No".
- Secondly, there is a minor text rendering issue in the SOS Note. "Suggested Action:" should render to "<>Suggested Action:<>". Can you either rectify it to render to that or alternatively just strip those characters from the SOS Note string.

Regards,

Benedict Panizza
